

Harvey's Lab Tours

Reflection questions
and activities for
families

This document provides reflection questions and simple activities for young patients and their families to complete after a Harvey's Lab Tour.

It is designed to help children think about what they saw in the laboratory, the equipment they learnt about and the biomedical scientists they met.

Taking time to reflect and talk about new experiences can help children better understand what they have seen, remember what they learned and feel more confident about the tests that support their care.

The questions and drawing activities also encourage families to talk together about the visit and revisit the experience afterwards. Please amend the document to personalise it to your tours and young patients.

Harvey's Lab Tours

Reflection questions and activities for families

Use the question sheets to write down what happened during your tour.

You can keep them as a reminder of what you saw and did, and look back at them together.

The best thing I saw was

One thing I didn't know before today

My favourite piece of equipment was

I learnt that labs are

A new word I learnt today is

I was proud when

One thing that surprised me was

One thing I want to remember is

I noticed scientists have to

I noticed labels are important because

I noticed scientists have to check things more than once because

I noticed the lab is quiet/busy because

If I could ask one more question, it to would be

Something I want to tell someone at home is

Something I want to tell my teacher is

I'm still curious about

Draw the Biomedical Scientists you met

Draw the Lab you visited

Draw your favourite piece of equipment
