Biomedical scientists and support staff are an essential part of your healthcare team. They provide vital scientific information, allowing informed clinical decisions to be made.

Biomedical science laboratories work 24/7 carrying out tests on tissue and blood samples. The results of these tests enable doctors to diagnose disease and monitor patients’ treatment.

Have you ever given a sample to a doctor or nurse?

Have you ever wondered what happens to your sample?

Your sample will have been analysed in a laboratory by a biomedical professional.

DID YOU KNOW?

70% of medical diagnoses are based on biomedical laboratory test result.

150 million samples are handled by biomedical scientists every year.

Most people in the UK will have benefited from the work of biomedical science professionals at some point during their lifetime.
